

Founded by former Disney Imagineers,

Art and Automation is an imaginative and inventive company with engineering resources and design experience unmatched in Hawaii... or anywhere else for that matter. No other company in the State of Hawaii offers the breadth of capabilities that we do.

Our background in theme park and entertainment industry design differentiates us from typical audio/video firms. We function in concert with, and as part of the design team on our projects, leaving no stone unturned. Our holistic, integrated approach to our work allows a level of control over the final product that consistently exceeds client expectations.

AMX's Modero Touchpanels provide easy one-touch control over your whole home.

Although audio/video distribution and control is at the heart of what we do, we also specialize in lighting design and lighting control systems that both accentuate your home and save energy at the same time. And, with a former IMAX Theater engineer on staff, we've been known to knock out a pretty impressive theater from time to time as well. In fact, in 2007 we were awarded an Electronic House of the Year award for our work.

Art and Automation is proud of our strong commitment to our community and to our environment. In addition to our ongoing support of local organizations, in 2007 we coordinated and donated the AV systems for a family on Oahu and community center, both featured on ABC's Extreme Makeover Home Edition.

Brimming with elegance, sophistication and an open design that blurs the line between outdoor and indoor living, you'd never guess the resort-inspired paradise holds enough electronics to make it a worthy winner of our Wow-Factor category. - Electronic House Magazine

"It takes a good imagination, close collaboration and strong determination to pile a mountain of electronics into a home without disrupting any of its natural beauty and tranquility... this Hawaiian getaway holds all the magic of a Disney attraction plus all the wonderful comforts of home."

-Electronic House Magazine

Art and Automation is more than just a name.

Actually it's a reflection of our design philosophy. We provide integrated solutions with a level of art and craftsmanship that is above and beyond our competitors: Connected environments *without* compromised aesthetics.

Home Automation

Imagine a single point of control for everything in your home: Lights, Audio, TVs, Thermostat, Pool, Security, Shades. That's the idea behind home automation. Simply put, the "automation system" ties everything in your house together and makes it all easy to use.

Home Theater

We specialize in Theater Systems. The sky's the limit when it comes to your home theater - but it doesn't have to break the bank either. We can design a theater around your needs and your budget, and guarantee you'll be satisfied with the results.

Security Integration

Arm, disarm, or check alerts at a glance with our integrated security. Easier to use than a traditional security keypad, these systems offer you a clean and simple interface for monitoring and arming your home's security.

Lighting Control and Motorized Shades

Lighting controls beautify your home while making it more secure. You can control any light from anywhere in your house or set automatic scenes. Best of all, installing lighting controls can drastically decrease your electrical bills and increase your home's value.

Whole House Audio

Come home, pop your iPod into the wall dock, and fill the whole house with your favorite music. Hidden speakers in your ceiling and walls fill the air with crisp, pure sound.

The ability to play any music, anywhere, at any time means no one ever has to compete for "their" time on the stereo.

Structured Wiring

A Structured wiring system provides access to systems such as phone, network, and cable TV, in every room.

Installing a structured wiring system also helps to "future proof" your home by ensuring that you'll be ready for the next great technology when it arrives.

Energy Efficient Lighting

Today's LED lights provide the same warm color as traditional bulbs, but use fractions of the energy. They dim just like regular lightbulbs, but last up to 80,000 hours. Combined with lighting controls, these can make a huge impact on your monthly electrical bill.

Environmental Controls

"Smart" thermostats and other climate control devices add to the Home Automation system's ability to 1) control your comfort within your home and 2) manage the energy usage of your home.

ART AND AUTOMATION, INC.™

Maui's leading and most innovative
custom home electronics resource

About Us & Our Capabilities

ART AND AUTOMATION, INC.™

Brand Name Electronics

We represent most major electronics manufacturers as either a direct dealer or via distribution. This translates to the latest gear at competitive prices with real manufacturer support. Although this is by no means a complete list, here is a sampling of some of the premiere brands we represent:

Our Environmentally-Friendly Commitment

We take our beautiful Maui home seriously, and strive to protect it however we can. To that end, we have made a commitment to be Maui's first carbon neutral AV company by 2009. In addition, we are taking the following steps to ensure our systems and activities are as environmentally friendly as possible:

- *Careful Product Choices:* Where possible we are eliminating elemental forms of bromine and chlorine, such as polyvinyl chloride (PVC) and brominated flame retardants (BFRs) by choosing compliant products.
- *Energy Efficient Design:* As part of our design process we consider energy consumption of our systems to determine the most efficient mix of components and system architecture.
- *Operational Changes:* We actively work to consolidate our shipping and transit to affect the lowest possible carbon footprint from our operations.
- *Recycling:* We work to ensure that a majority of our operational and job site waste is recovered and recycled.

Professional Affiliations

Art and Automation is a proud member of the US Green Building Council, and the American Institute of Architects Sustainable Building Programs. We are also members of CEDIA, and have an AMX certified ACE programmer on staff.
