

## About Us

### Founded by former Disney Imagineers,

Art and Automation is an imaginative and inventive company with engineering resources and design experience unmatched in Hawaii... or anywhere else for that matter. No other company in the State of Hawaii offers the breadth of capabilities that we do.

Our background in theme park and entertainment industry design differentiates us from typical audio/video firms. We function in concert with, and as part of the design team on our projects, leaving no stone unturned. Our holistic, integrated approach to our work allows a level of control over the final product that consistently exceeds client expectations.

Although audio/video distribution and control is at the heart of what we do, we also specialize in lighting design and lighting control systems that both accentuate your home and save energy at the same

time. And, with a former IMAX Theater engineer on staff, we've been known to knock out a pretty impressive theater from time to time as well. In fact, in 2007 we were awarded an Electronic House of the Year award for our work.

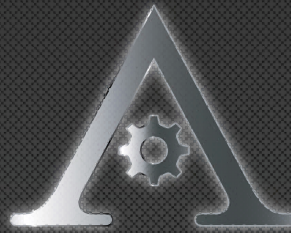

AMX's Modero Touchpanels provide easy one-touch control over your whole home.

Art and Automation is proud of our strong commitment to our community and to our environment. In addition to our ongoing support of local organizations, in 2007 we coordinated and donated the AV systems for a family on

Oahu and community center, both featured on ABC's Extreme Makeover:Home Edition.

Sundays, 8/7c on ABC

## ART AND AUTOMATION, INC.

Maui's leading and most innovative custom home electronics resource

## Great Ideas for your Home

# Great ideas for your home:

ART AND AUTOMATION, INC.

## 1. Lighting and Shades

Use lighting controls and motorized shades to beautify your home while making it more secure. Installing lighting controls can drastically decrease your electrical bills and increase your home's value.

## 2. Whole House Audio

Use hidden speakers in your ceiling and walls fill the air with crisp, pure sound. The ability to play any music, anywhere, at any time means no one ever has to compete for "their" time on the stereo.

## 3. Security Integration

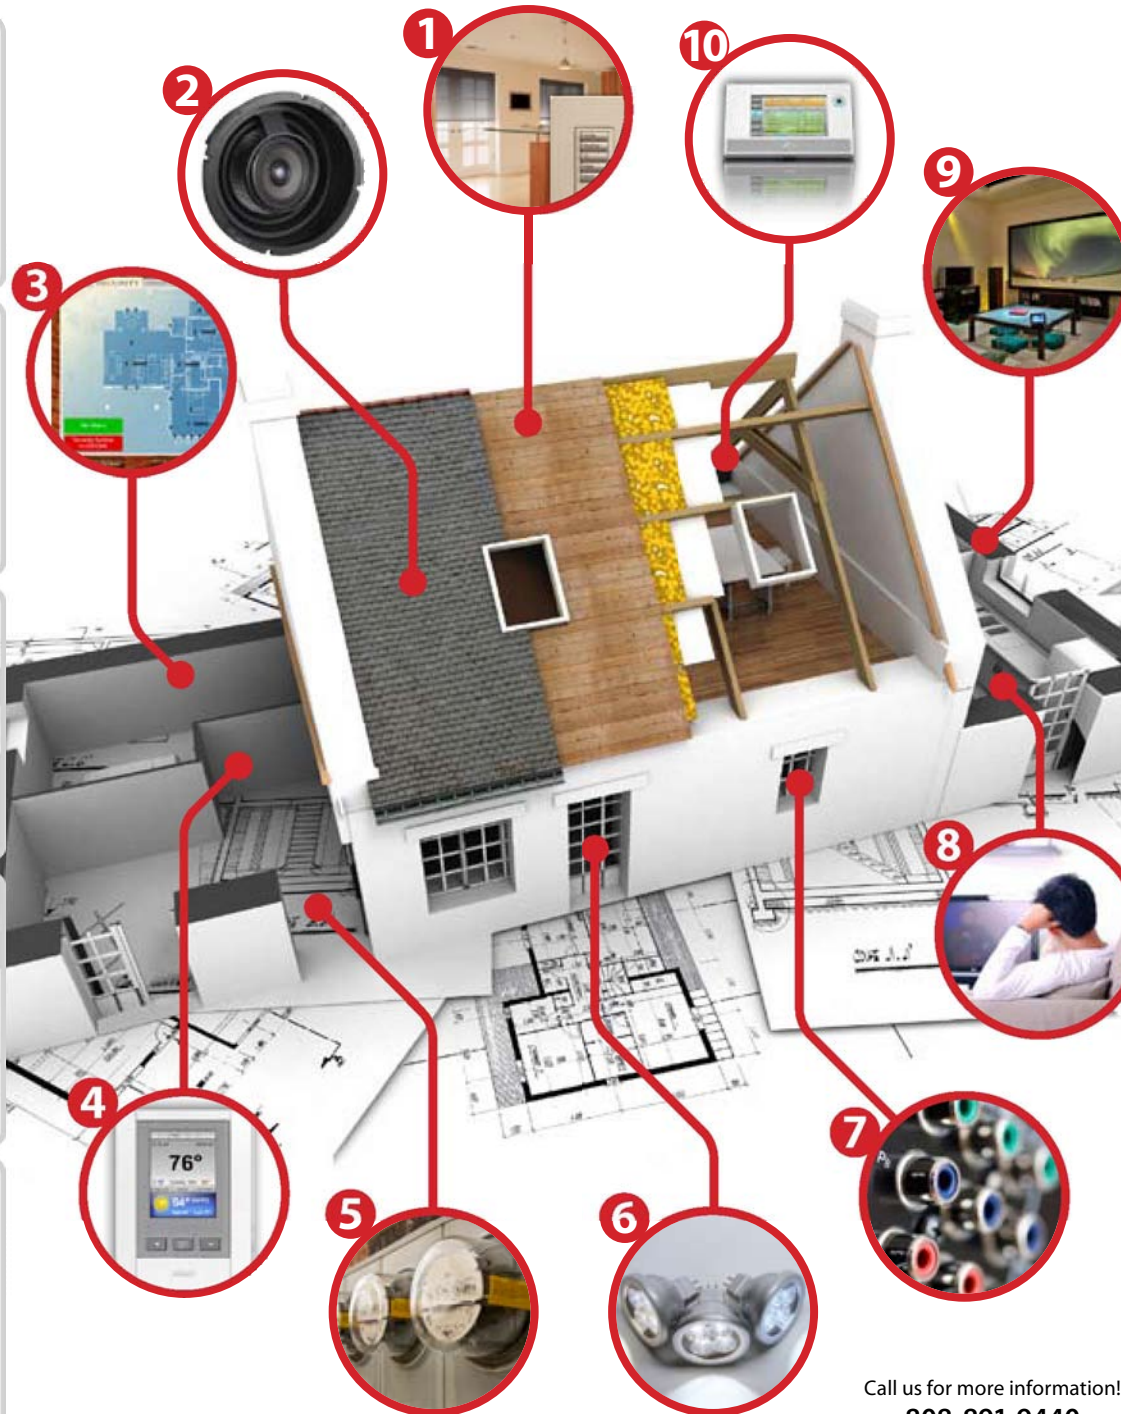

With our integrated security you can arm, disarm, or check alerts at a glance. Easier to use than a traditional security keypad, these systems offer you a clean and simple interface for monitoring and arming your home's security.

## 4. Climate Control

Adding "smart" thermostats and other climate control devices allows you to easily control your comfort within your home from your touchpanel or computer.

## 5. Energy Management

Use energy management controls built into your home to tell how much energy your home is using and why. Clear feedback and easy controls allow you to stay on top of your home and catch problems early.

## 10. Home Automation

Simply put, the "automation system" ties everything in your house together and makes it easy to use. Control everything in your home: lights, audio, TVs, thermostat, pool, security, shades and more.

## 9. Home Theater

Why brave the crowds when you can have a private theater at your home? We can design a theater around your needs and your budget, and guarantee you'll be satisfied with the results.

## 8. Distributed Audio/Video

With our integrated security you can arm, disarm, or check alerts at a glance. Easier to use than a traditional security keypad, these systems offer you a clean and simple interface for monitoring and arming your home's security.

## 7. Structured Wiring

Help "future proof" your home and ensure that you'll be ready for the next great technology when it arrives. A structured wiring system provides access to systems such as phone, network, and cable TV, in every room.

## 6. Energy Efficient Lighting

LED lights provide the same warm color as traditional bulbs, but use fractions of the energy, and last up to 80,000 hours. Combined with lighting controls, these can make a huge impact on your monthly electrical bill.
